

IN THE SPECIFICATION

Please amend the specification as follows:

Replace the paragraph on page 7, between lines 3-10 of the specification with the following:

In another embodiment, the pattern of conductors includes contact pads for contacting a component that can be assembled to the surface of the body, and the shape of the body is fitted for assembly of the active device. For many applications, it is advantageous that any further active devices can be assembled to the surface of the body. Examples of such active devices are integrated circuits and other such semiconductor devices, which may be too expensive for integration in the body; display devices, speakers, microphones and lenses that need to be provided at the surface of the body in order to fulfill their functions; and other devices for which integration is not preferred.
